

ABSTRACT OF THE DISCLOSURE

In a method for mounting an electronic part on a mounting substrate in that projection electrodes provided on the electronic part are welded  
5 by fusion to join connection terminals provided on the mounting substrate, the flux paste includes a base flux and metal grains having diameters smaller than the diameters of projection electrodes and having a thickness so as to form a space between the  
10 flux paste and the electronic part when the electronic part is mounted on the mounting substrate and the flux paste is arranged on the mounting substrate. A resin is sealed in the space formed  
15 substrate after the projection electrodes are joined to the connection terminals.
